Step by Step Instructions

1. (For planter with markers) Loosely bolt the 435-4835Y1 pedestals together using the 3/4" x 1-1/2" bolts, nuts, and washers. Set assembled pedestals on the main hitch bar.
2. Loosely bolt the 3/4" U-Bolts on the pedestals and move rear pedestal toward the back of the planter until the rear U-Bolt touches the rear cylinder gusset. Loosely mount front bracket in front of the rear bracket to match your tank cradle profile.
3. Place the tank cradle on the pedestals and loosely bolt them together using the 5/8" bolts, washers, and nuts.
4. Place the tank in the cradle. Line the tank strap grooves up to the holes in the cradle. Use the tank strap kits to tighten the tank to the cradle.
5. (For planter with markers) Tighten down 3/4" bolts connecting the two pedestal halves, then tighten down 5/8" bolts on the cradle.
6. Make sure the tank and cradle have proper clearance from CCS tanks (should be approximately 1 - 2" of clearance). Tighten down U-Bolts and all other hardware. **If your planter has markers, be sure to note the best point of marker clearance on your cradle.** If you attempt to fold the planter with the hitch all the way down you will be in danger of hitting the side of the tank with your markers. Be sure to raise the hitch as much as possible before folding to prevent any contact with the tank.
7. Tighten tank straps after first filling.
