Step by Step Instructions

1. Begin by removing the cable tray and hydraulic hose support brackets from the main hitch bar (reference pictures to the right for locations). You will replace these with the 4967Y1 and 4968Y1 brackets later.
2. Loosely bolt the 4966Y1 brackets on the bar (reference picture for exact locations) using the provided U-Bolts. Using the 4967Y1 and 4968Y1 brackets, replace the original cable tray and hose support brackets by bolting them onto the tank brackets as shown below and bolt original hardware onto the new brackets.
3. Place the tank saddles on the brackets in the configuration shown below. Use the 1/2" hardware to loosely bolt them to the brackets.
4. Place the tank into the saddles. Line the tank strap grooves up with the hole pattern in the saddles. Use the tank strap kits to tighten the tank to the saddles. Tighten down tank saddle hardware followed by the tank bracket U-Bolts.
5. Tighten the tank straps after first filling.
