

Step by Step Instructions

1. Mount the 410-5777Y1 bracket to the rear CCS support leg in the location shown below using the provided U-Bolts. You can mount the bracket on either side of the planter, it is your choice based on your application.
***This kit only works on planters with 70bu CCS dual hoppers.**
2. Mount the 400-5605Y1 brackets to the main bracket using the provided 3/8" hardware. You can mount the 5605Y1 brackets in any of the mounting holes provided. Be sure to use 2 mounting holes so the bracket will have intended effect. Tighten 3/8" hardware to secure the brackets.
3. Mount pump to the 5605Y1 brackets using the provided 1/2" hardware. The pump should be mounted with the hydraulic block towards the rear of the planter for best clearance.
4. Once pump is in place and clear of all obstructions, tighten U-Bolts and 1/2" pump hardware.
5. If you have a second pump, mount bracket on the opposite CCS support leg and repeat the steps above.
